

METALIZED TAPE

Technical Data Sheet

Metallic Tape is a polyester tape, which is unbelievable thin and still incredibly strong. It is often used to join vapour barriers such as Polykraft STD and Polykraft RE.

The excellent stretch qualities of **Metalized Tape** ensure a vapour tight seal, even if the sheet is being forced apart. Besides this it is also non-flammable.

Application: Apply **Metalized Tape** with an overlap of min. 150 mm.

Surface Presentation: **Metalized Tape** has a great sealing ability, but when applied the surface must be clean, dry and grease free. Clean the surface thoroughly before application.

Product Name	<i>Metalized Tape</i>
Description	Aluminium like faced tape with one adhesive surface.
Thickness <i>Nominal</i>	0,048 mm
Colour	Alu
Roll Size	5 cm x 30 m
Tensile Strength	125N/cm
Tensile adhesion	5N/cm
Elongation	140%
Water vapour resistance	0,17 g/m² – 24 hour at 40°C
Thermal Behaviour	Stable between -20°C to +100°C
Application Temp.	0°C to +40°C (dry surface)
